

Dear valued partner,

Call to help us reduce our Carbon footprint by 2040

Climate change is a global emergency that goes beyond national borders. To limit global warming to maximum 1.5°C, aligning with the latest science-based targets and the Paris Agreement is essential.

MTN has committed to achieve net zero emissions by 2040. This is part of our Ambition 2025 strategy: leading digital solutions for Africa's process which includes creating shared value, with ESG at the core.

With global warming impacting countries, communities and people everywhere, we have set ourselves science-based targets aligned to the Paris Agreement i.e., to achieve a 47% average reduction in MTN's absolute scope 1,2 and 3 emissions (tCO₂e) by 2030.

As nearly 81% of greenhouse gas (GHG) emissions are Scope 3 emissions, we can only achieve our goal by collaborating closely with our suppliers. We therefore call on you, our valued supply chain partners, to pledge your commitment and work alongside us by:

1. Committing to set emission-reduction targets in alignment with science-based targets by 2026 for your organisation and publicly communicating your commitment.
2. Considering joining CDP supply chain programme as a member by reporting environmental data through CDP's questionnaires and then sharing your emission data with us.
3. Preparing a carbon emission reduction roadmap by identifying potential decarbonization levers across scope 1,2 and 3 that can be implemented across your organizations global footprint
4. Considering adopting waste management practices and circular economy, and actively supporting our activities to provide life cycle product service to our customers including trade-ins and recycling options.

For further information on how to align with our ambition, please refer:

- [1.5°C Business Playbook](#) - A guide for how to align your organization around the 1.5°C ambition.

MTN Group Road to Zero Call to Action
